

Freight Future Scenarios

The strategy so far has been developed using suites of existing evidence and analysis. We have ambitious plans to grow and improve the modelling and analysis capability within TfN to support and develop the way we build business cases.

Using TfN's Future Travel Scenarios as a starting point, we have undertaken further work to produce forecasts of freight movements associated with potential changes in future land-use, economic growth and different policy outcomes.

Population growth differs by area type to reflect different spatial planning measures seen across our 4 TfN Future Travel Scenarios:

- Just about managing
- Prioritised places
- Digitally distributed
- Urban zero carbon
